

It's our pleasure to introduce our service of:

## DUMPERS RESTORATION

### WHY RESTORE A DUMPER?

1. **How does a dumper work?:**

- It's a support machine on site.
- The average use per rental day is 3.7 hours.
- A high percentage of the time the machine is waiting to be loaded, with the engine idling.
- The dumper does not push, it just carries loads.

2. **Other relevant aspects:**

- Spanish rental fleets are in a declining occupation, resulting in many machines with few hours and a few years of operation.
- They have first line component: Dana axles / ITL gearbox.
- This type of machine does not suffer a fast technical evolution - a new dumper = Dumper seven years ago.

3. **Consequently:**

- Machines with 4/5 years are mechanically new. They may have a poor painting appearance & simple elements' wear, which are easy to solve/repair.

4. **Economic sense of the restoration/ improvements:**

- Check-up of simple mechanical elements.
- Factory's painting finish (original color or customer choice).
- New high quality tyres.
- The resulting machine is like a new one, in good use for five more years of life without problems.
- In contrast, the new machines do not have great advantages.
- The restored machine has a very competitive price that allows:
  - Having the dumper to complement the range (low usage).
  - Rent at lower prices.

5. **After-sale:**

- **In Mark & Maq we offer you a wide range of used machines and a professional restoring service. The machines are delivered with certificates and full technical information. We also have a large stock of spare parts for the machines we sell.**
